Pred. No. is the number of results predicted by chance to have a score greeter than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence is human drug metabolizing eargem (bW:17) proctai. 
Treatment and firs nucleic enid molecule are useful for the diagnosis, 
textement and prevention of discorders associated with increased or 
decreased expression of DME. Examples of such discorders include.

Pred. No. is the number of results predicted by chance to have a core greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
